### Voice Assistance Using IOT

Voice Assistance Using IOT

Here's a small summary of voice assistance using IoT:

Voice assistance using IoT enables devices to:

- Listen to voice commands
- Process requests using cloud or local processing
- Control smart devices (e.g., lights, thermostats, security cameras)
- Provide information (e.g., weather, news, calendar events)
- Learn habits and adapt to user preferences

Examples of voice assistants in IoT include:

- Amazon Alexa
- Google Assistant
- Apple Siri
- Samsung Bixby

These assistants integrate with various devices, making our lives more convenient and automated.
